

Digital Technician

Belladent Dental Labs

It's time to pivot.

Are you looking for a new opportunity to shift gears and start fresh? We are fast-tracked to become the leading digital dentistry laboratory in Atlantic Canada and we have an exciting opportunity for the right people to grow with us.

Many of our staff have been trained on-the-job to become proficient and skilled technicians. If the following traits TRULY describe you and you're interested in a new challenge this might be the place you've been looking for.

- You take pride in yourself and in your work.
- You love to learn something new and challenge yourself.
- You like to work with your hands – maybe you bake, you're an artist or you play an instrument?
- You are well-organized and methodical.
- You are self-motivated and take ownership of your role and responsibilities.
- You have strong attention to detail, accuracy and safety.
- You have basic computer skills and are proficient in math.

Belladent is doing a deep dive into digital dentistry and we are growing our team to deliver digital-based solutions to our doctors.

As CAD/CAM technology continues to change the face of dentistry on all fronts, Belladent Dental Labs is delivering excellent results in areas where dentists are demanding technical experience and expertise. Our expertise and reputation in more complex reconstructions have driven our growth and set us apart from the competition. Digital dentistry is now the key to our future potential.

We have a full-time permanent unique entry level position for someone who is adaptable and able to learn independently within a team-supported environment. If you have drive and initiative and a desire to learn, this opportunity might be for you.

You will begin right away in Fabricating Models (Conventional and Digital); Operating a 3D Printer + Milling Machine; and assisting within the department as required. On site training will be provided.

Qualifications

1. Previous dental laboratory experience / education is an asset, but not necessary.
2. Excellent manual dexterity with strong hand-eye coordination.
3. Physicality required.

Job Description:

We are looking for a someone interested in taking on a new challenge as we launch some new technology. Milling and 3D Printing manufacturing is at the core of this role.

General Responsibilities:

- Assist in the production of accurate digital designs to be submitted for manufacturing.
- Scan stone models and digitize them using scanners
- Monitors and downloads intraoral scans from various web portals and prepared models for 3D printing
- Nesting, loading, and preparing milling machines and 3D Printers for production parts
- Operates and maintains milling machines.
- Takes precise measurements for calibration.
- Monitors production, adjusting CAM software, as necessary.
- Checks output for quality assurance and documents or discards defects.
- Process improvement projects including but not limited to new product validation for 3D printing, milling strategy optimization and other software and hardware projects
- Identifies need for and performs machine maintenance and minor repairs.
- Ensure equipment is clean, calibrated, and in good working order for daily production use.
- Contributes to team effort by accomplishing related tasks as needed.

To apply, send your resume and a cover letter describing your skill set as it fits this position to admin@belladentlabs.com

Only candidates who qualify will be contacted for an interview.
